Bevölkerungsprognose 2012 bis 2031

für Graz nach Bezirken

Die hier vorliegende Bevölkerungsprognose für die Landeshauptstadt Graz mit ihren 17 Bezirken wurde von der STATISTIK AUSTRIA im Auftrag des Magistrat Graz, Präsidialabteilung - Referat für Statistik - erstellt.

1.1 Bericht Statistik Austria

Prognosekonzept und Annahmen:

Die vorliegende Bevölkerungsprognose für Graz nach den 17 Bezirken wurde im konzeptuellen Rahmen der aktuellsten Bevölkerungsprognose für Österreich und die neun Bundesländer der STATISTIK AUSTRIA sowie der neuesten kleinräumigen Bevölkerungsprognose (ÖROK-Prognose) erstellt. Diese neueste Bevölkerungsprognose wurde im Herbst 2011, die ÖROK-Prognose im Sommer 2010 veröffentlicht.

Ausgehend von der Bevölkerungszahl und Struktur zum 1.1.2011 werden die Grazer Bezirksbevölkerungen bis zum 1.1.2031 vorausgeschätzt. Zusätzlich sind die Bevölkerungszahlen nach dem Geburtsland (im Inland/Ausland geboren) dichotomisiert. Dabei sind Annahmen zur künftigen Entwicklung von fünf Prognoseparametern zu treffen, welche die künftigen Bevölkerungsveränderungen bestimmen:

1. Fertilität
2. Mortalität
3. Zuwanderung nach Graz
4. Abwanderung aus Graz
5. Binnenwanderung zwischen den 17 Grazer Bezirken

Insgesamt lehnen sich die Annahmen zu diesen Parametern an die oben erwähnten Prognosen an. Bezuglich der **Fertilität** wurden auf Basis der vom Magistrat der Stadt Graz zur Verfügung gestellten Geburtenzahlen nach Alter und Geburtsland der Mutter bezirksspezifische Fertilitätsmuster geschätzt. Diese wurden in einem zweiten Schritt an die Ergebnisse der amtlichen Geburtenstatistik für Graz sowie die vorläufigen Ergebnisse der Grazer Geburten 2011 angepasst.

Die künftige Entwicklung der Fertilität gemäß der vorliegenden Prognose orientiert sich an den Annahmen der ÖROK-Prognose für die Stadt Graz. Demnach wird die durchschnittliche Kinderzahl pro Frau in der steirischen Landeshauptstadt von derzeit 1,32 (2010) auf 1,41 bis zum Jahr 2030 ansteigen. Weiters wird unterstellt, dass sich bis zu diesem Jahr die bezirks- und geburtslandspezifischen Unterschiede in der Fertilität halbieren.

Die **Mortalitätsannahmen** wurden für die Grazer Bezirke ebenfalls aus der bereits erwähnten ÖROK-Prognose übernommen. Dabei wurde zwar nicht nach regionalen Kriterien differenziert, die Unterschiede zwischen den Geschlechtern und in der Mortalität von im Inland bzw. Ausland geborenen Menschen sind sehr wohl berücksichtigt. Demnach haben im Inland geborene Männer eine um 2% höhere Sterblichkeit als der Durchschnitt, im Ausland geborene Männer hingegen eine um 9% niedrigere Sterblichkeit. Während es bei den Frauen, die im Inland geboren sind, nahezu keine Abweichung gibt, ist die Mortalität der im Ausland geborenen Frauen bloß um 1% niedriger als der Durchschnitt. Auch hier wird unterstellt, dass sich die Disparitäten langfristig verringern, für das fiktive Jahr 2050 wurde ein Konvergenzpunkt unterstellt.

Nach den getroffenen Annahmen wird die Lebenserwartung in Graz weiter steigen, und zwar insgesamt für Männer von geschätzten 78,4 Jahren (2010) auf 86,1 Jahre (2050) und für Frauen im gleichen Zeitraum von 84,1 auf 90,0 Jahre.

Obwohl die **Zuwanderung** nach Graz prognosetechnisch als ein Parameter modelliert wird, ist bei der Annahmenfindung zwischen internationaler Zuwanderung sowie Zuzügen aus anderen Gemeinden der Steiermark und Österreichs zu unterscheiden. Bei der internationalen Zuwanderung wird von den Annahmen der ÖRO-Prognose ausgegangen. Die Zuwanderung aus den anderen Gemeinden der Steiermark

bzw. den übrigen Bundesländern Österreichs wird aus den Ergebnissen der ÖROK-Prognose übernommen. Demnach geht die jährliche Außenzuwanderung nach Graz von derzeit 15.500 (2011) auf 13.100 (2030) leicht zurück. Die Aufteilung der Zuwanderung nach Graz sowie deren Struktur nach Alter, Geschlecht und Geburtsland wird aus den Ergebnissen der Wanderungsstatistik der Jahre 2002 bis 2010 abgeleitet.

Die **Abwanderung** aus Graz wird mittels alters- und geschlechtsspezifischer Abwanderungsraten modelliert. Die Ausgangswerte wurden ebenfalls aus den Ergebnissen der Wanderungsstatistik abgeleitet. Diese alters- und geschlechtsspezifischen Wegzugsraten sind zusätzlich nach den Bezirken sowie nach dem Geburtsland disaggregiert und werden über den gesamten Projektionszeitraum konstant gehalten.

Schließlich sind auch noch Annahmen zur künftigen Verflechtung der **Binnenwanderung** zu treffen. Hier wird unterstellt, dass die geburtslands-, alters-, geschlechts- und richtungsspezifischen Binnenwanderungsraten, wie sie sich aus der Wanderungsstatistik der Jahre 2002 bis 2010 zeigen, über den gesamten Projektionszeitraum konstant bleiben.

Hauptergebnisse

Nach den Ergebnissen der vorliegenden Prognose wird die Bevölkerungszahl der Stadt Graz auch in Zukunft wachsen. Dies gilt nicht nur für die Landeshauptstadt insgesamt, sondern auch für alle 17 Bezirke. Insgesamt nimmt die Bevölkerung zwischen dem 1.1.2011 und dem 1.1.2031 um 27.000 Personen bzw. 10% zu. Dies bedeutet für 2031 eine Einwohnerzahl von 289.000 gegenüber 262.000 im Jahr 2011. Auf Bezirksebene sind die stärksten Zuwächse in Sankt Leonhard, Mariatrost und Wetzelsdorf zu erwarten, wo die Bevölkerung 2031 um rund 15% größer sein wird als derzeit. Aber auch die Bezirke Geidorf, Lend, Gries, Jakomini, und Gösting haben mit einem Zuwachs zwischen 10 und 13% zu rechnen. Im Bezirk Ries wird die Bevölkerungszahl allerdings stagnieren, hier sind gemäß Prognose künftig keine Zuwächse zu erwarten.

Graz wird auch in Zukunft eine „junge“ Stadt bleiben. Das Durchschnittsalter steigt hier zwischen 2011 und 2031 bloß von 40,9 auf 42,3 Jahre an. In der gesamten Steiermark ist hingegen ein Anstieg von 42,6 auf 46,3 Jahre zu erwarten. Grund dafür sind die bis zum Jahr 2030 steigenden Geburtenzahlen. Die Zuwanderung nach Graz hält einerseits die Bevölkerung jung und führt auch zu mehr Geburten. Jedenfalls ist im gesamten Projektionszeitraum ab 2011 mit positiven Geburtenbilanzen zu rechnen.

Erstmals ist die Bevölkerungsprognose für Graz auch nach dem Geburtsland der Bevölkerung disaggregiert. Hier zeigt sich erwartungsgemäß, dass die im Ausland geborene Bevölkerung der steirischen Landeshauptstadt deutlich stärker wächst als die Gesamtbevölkerung. Von den derzeit 261.500 Grazerinnen und Grazern sind 55.000 im Ausland geboren. Dies entspricht einem Anteil von 21,0%. Bis 2031 steigt dieser Anteil auf 25,5% aus 73.500 Personen. Dann wird somit ein Viertel der Grazer Bevölkerung im Ausland geboren sein. Die mit Abstand höchsten Anteile im Ausland geborener Menschen haben die Bezirke Lend (31,9%) und Gries (35,7%). Während dieser Anteil im Bezirk Lend bis 2031 noch leicht auf 32,6% steigt, ist er im Bezirk Gries rückläufig: Bis 2031 geht er auf 34,9% zurück. Gries bleibt aber über den gesamten Projektionszeitraum der Bezirk mit dem höchsten Anteil an Bevölkerung mit ausländischem Geburtsort.

Weitere Anmerkungen zur Prognose

Die vom Magistrat der Stadt Graz übermittelten Neubauprojekte für 2011 wurden in der Prognose auf zwei Jahre verteilt berücksichtigt. Dabei wurden die Anzahl der einziehenden Personen mit der Zimmerzahl der neuen Wohneinheiten gewichtet (1 Zimmer: 1 Person, 2 Zimmer: 2 Personen usw.). Die Altersstruktur der Neubauinzieher wurde aus der Binnenzuwanderung übernommen.

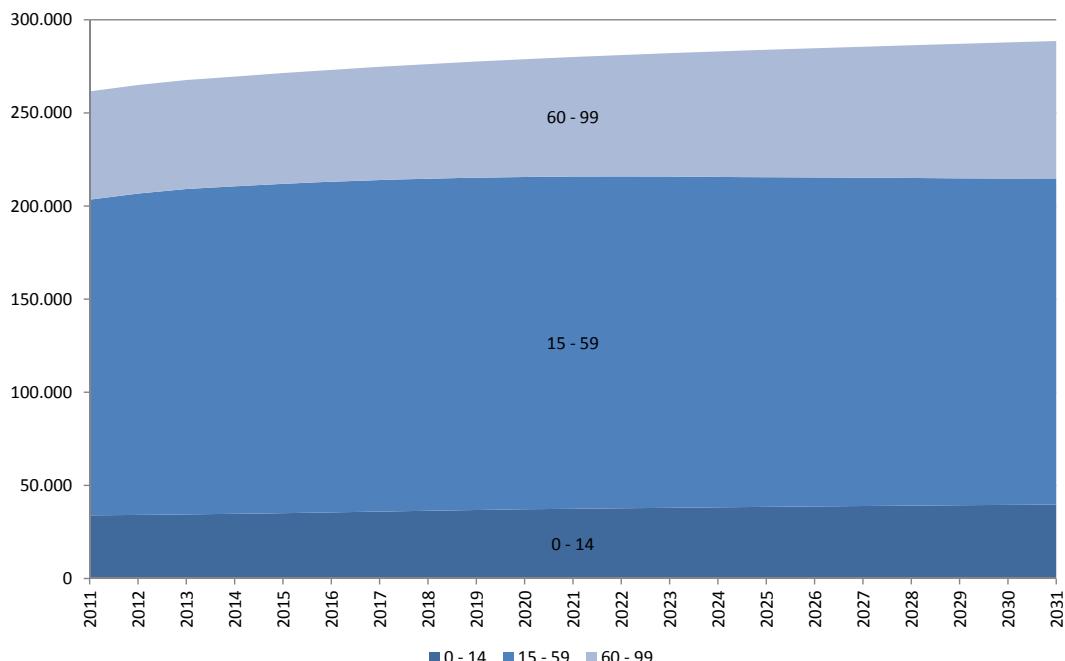

Weiters wurde auch die Belegung in den Anstaltshaushalten berücksichtigt. Dies betrifft all jene Anstalten mit mehr als 100 Personen, die dort ihren Hauptwohnsitz haben. Das sind die Justizanstalten Karlau und Jakomini, die Studentenheime in Geidorf, Lend und Eggenberg sowie die Pflege- bzw. Seniorenheime in Lend, Wetzelsdorf und Geidorf. Allerdings unterscheiden sich die Ergebnisse dieser

Durchrechnung nur minimal von jener ohne Berücksichtigung der Anstalten. Zudem hat diese Version den Nachteil, dass die Sterbefälle und Wanderungsbewegungen unterschätzt werden, da dieser Baustein die Anstaltsbevölkerung von allen demographischen Prozessen ausschließt. Deshalb sind hier die Ergebnisse ohne gesonderte Berücksichtigung der Anstaltsbevölkerung angeführt. Es zeigt sich, dass die Bevölkerung in den Anstalten ohnedies sehr gut durch die Zu- und Abwanderung modelliert wird.

Mag. Alexander Hanika
